Cosmic Catastrophes
The Lives and Deaths of Stars

AST 309N
• Handouts
• Syllabus/Schedule
• Webpage: http://www.as.utexas.edu/astronomy/education/fall06/wheeler/309n.html (not blackboard)
• Book: Cosmic Catastrophes (second edition in the works; posted on class web site)
• Four exams, Final
• Grading (90-100 A, 80-89 B, 70-79 C, etc (do not drop lowest exam -- but extra credit!)
• Review Sessions - Thursday, 5 - 6 PM
• Schedule - brief background then start with Chapter 5
• Leave room for Chapter 12 and extra stuff
Reading: Chapters 1 thru 4 for background plus Chapter 5 - White Dwarfs

Chapters 1 & 2 - AST 301

- Particles, forces, neutrinos
- Charge repulsion
- Pressure -
  - Thermal
  - Quantum
- Nuclear Reactions

Chapters 3 & 4

- Binary Star Evolution
- Accretion Disks

Will refer to as needed
Extra Credit

On exams:

Astronomy in the News,  
NASA’s Astronomy picture of the day  

Sky Watch Project - log of observations: up to 5 points on term average (equivalent to 25 points on a single exam!). Due on Monday after each hourly exam.

Keep an eye on Betelgeuse in Orion, also locate Sirius A, the Crab Nebula, Cassiopeiae A, Cygnus X-1, Sagittarius A, others. Record enough information so that I can tell you actually went out at night and tried to see something. Give a brief summary of why they are important. Some of these can be seen with the naked eye, some not. Some can be seen now, some later in the term.
One minute exams

Peer interaction

Scientific Research: Exploring the Unknown

**Known**

Summary of what we have learned of the natural world by rigorous study of nature: observation, experiment, guided by peer review, reproducibility, mathematical consistency.

**Unknown**

Where the fun is! This class will explore some of those boundaries.

**Not yet known**

Need more scientific research, understanding.

**Unknowable**

Science assumes no aspect of the natural world is fundamentally unknowable.
The Past is All Around Us
The Universe is a strange place!

It began in a Big Bang, the creation of space and time as we know them,

It has been expanding for 14 billion years,

It is full of dark matter, unlike protons, neutrons, electrons, our stuff, that nevertheless gravitates.

It currently seems to be accelerating in the grip of some anti-gravitating “dark energy.”

On the microscopic scale, nature follows the laws of quantum theory, probability not certainty, quantum jumps, wave-like properties of particles.

Study the stars - see where that leads…
