

AST 307
"Introductory Astronomy"
Fall 2009

Professor Gregory A. Shields
TTH 11-12:15 (Unique No. 49500)
RLM 5.104

Course Description

What are the stars? How old are they, how were they born, and when will they die? How does our Milky Way compare to other galaxies? How did the Universe begin and how did it evolve into its present form? What processes led to the formation of stars and planets? What is the future of the solar system, the Galaxy, and the universe? Are we alone in the universe?

These questions fascinate everyone. Astronomers have some answers, but many questions remain. This course gives a survey of modern astronomy. Topics include the solar system, exoplanets, stars, interstellar gas, galaxies, quasars, the Big Bang, dark matter and dark energy, and life in the universe. The goals are to leave the student with a picture of our place in the universe and a foundation in the use of observational technique and physical laws to understand nature.

Lectures will be illustrated with images and videos. Mathematics will include high school algebra but no calculus. Some homework assignments may involve nighttime observations.

Prerequisite. Math 305G or equivalent

Instructor. Professor Gregory Shields. Office: RLM 15.224. Phone: 471-1402. E-mail: shieldsga@mail.utexas.edu. Office Hours (subject to change): MW 3-4 pm, Th 2-3 pm
Web page: <http://bluebump.as.utexas.edu/shields.html>

Teaching Assistant: Mr. Paul Robertson. Office: RLM 16.340. Phone: 471-4475
E-mail: paul@astro.as.utexas.edu. Office Hours: (subject to change): MW 2-3 pm
Help sessions: M 5-6 pm in RLM 15.216B

Grading: The course grade will be based on three one-hour exams in class, and homework. (No final exam.) Exams will be closed book and will involve both multiple choice and essay questions. Exams will cover lectures, assigned reading, and homework. Make-up tests will not be given except for a compelling reason presented in advance or in case of illness. Exam weights and *tentative* dates are:

First exam	20%	Tu 9/29
Second exam	25%	Tu 11/3
Third Exam	25%	Tu 12/1

Homework will count 30%, based on grading of selected problems from homework sets.

Help sessions. Some of the lecture before each exam will be devoted to reviewing the material on the exam. Additional help sessions will be scheduled for help with the homework and class material.

Required text. Jeffrey Bennett et al. “The Cosmic Perspective: Stars, Galaxies & Cosmology” (2009, 5th edition, ISBN 0-321-55817-0). [Note: there are abbreviated versions of this book, devoted to “The Solar System” or to “Stars, Galaxies, and Cosmology” as well as an “Essential” version. We fill use the full version.]

Drop Dates. You may drop a course without academic penalty until September 23. You can then drop courses until October 21 with a Q or F, depending on your performance in class up to that time. October 21 is also the last day to change to or from the credit/no credit basis. After October 21, you may drop the course or withdraw from the University only for urgent and substantiated, nonacademic reasons. Please consult the University's published calendar (<http://registrar.utexas.edu>) to verify these dates and for further information.

Star Parties. Every Wednesday evening, if the weather is clear, there will be astronomical viewing with the 16-inch telescope on the roof of RLM Hall. These sessions will start about 7 p.m. during standard time and 8 p.m. when daylight saving time is in effect. There is also a 9-inch telescope on Painter Hall that is open to UT students on Friday evenings and to the general public on Saturday evenings. For observing hours, see the Department of Astronomy public outreach Web page at <http://outreach.as.utexas.edu/public>. You can use the 9-inch yourself if you are checked out on it. McDonald Observatory in west Texas has star parties and public nights (see <http://mcdonaldobservatory.org/visitors/programs>; phone 471-5285).

About the Instructor: Professor Shields was born in Los Angeles and grew up in Nebraska and Kansas. He earned a B.S. in Physics from Stanford University in 1968 and a Ph.D. in Astronomy at Caltech in 1973. Following a postdoctoral fellowship at Harvard, he joined the UT faculty in 1974. He now holds the title of The Jane and Roland Blumberg Centennial Professor in Astronomy, and served as Chairman of the Department of Astronomy from 1990 to 1994. He teaches both graduate and undergraduate courses at UT. His research interests include studies of nebulae, quasars and black holes, and he has published numerous research papers and popular articles.

Other Astronomy Courses. For other courses offered by the Department of Astronomy, see <http://www.as.utexas.edu> or the UT Undergraduate Catalog or the UT Course Schedule (<http://registrar.utexas.edu>).

Revised 8/27/09
