

# Cultural Evolution

## Next Factor in Drake Equation: $f_c$

- $f_c$ : fraction of planets with intelligent life that develop a technological phase, during which there is a **capability for** and **interest in** interstellar communication
- No significant biological evolution in last 40,000 to 200,000 years
- Evolutionary Takeover
  - Cultural evolution instead of biological
  - Much shorter timescale

# What is Cultural Evolution?

- No longer changes in genes (biological)
- Extra-somatic information
  - Information stored outside the body
- Changes in knowledge of group
  - Passed on by learning from others
- Allows combination of “lessons learned” from many individuals

# Example

- Culture in primates other than humans?
  - Differences in behavior of groups
- Example: Orangutans in Kluet swamp in Sumatra
  - Make and use tools (bark-stripped twigs) to get honey and seeds from fruit
  - Genetically similar group across Alas river do not
  - River too wide to cross
  - Key feature is high density: observe each other's behavior and learn

# Concepts

1. Timescales
2. Origin of agriculture
3. Extra-somatic information storage
4. Tools, technology
5. Interactions: written language, cities, taxes, classes, technology
6. Interest in communication
7. World view evolution
8. Coupling between technology and world view

# Timescales

- On next slide (which we will look at in more detail later) notice the timescales
- MUCH shorter than the previous kinds of evolution
- And accelerating!

|                 |             |                          |
|-----------------|-------------|--------------------------|
| Oral language   | 400,000?    | Cooperative hunting?     |
| Oral historians | 30,000?     | Traditions and Lore      |
| Clay tokens     | ~ 8500 B.C. | Sumeria (record keeping) |
| Clay tablets    | ~ 3000 B.C. | Business, Taxes          |
| Paper           | ~ 100 A.D.  | China                    |
| Printing press  | 1456 A.D.   | Europe                   |
| Radio           | 1895        | Italy                    |
| Television      | ~ 1936      | First “strong” broadcast |
| Computers       | ~ 1950’s    |                          |
| World-wide-web  | ~ 1990’s    |                          |

## Importance of farming

- The rise of civilizations all based on farming
- Understand origins of agriculture
- How likely to arise?
- Did it arise **independently** more than once?

# Origin of Agriculture

10,000 years ago within 50-100 miles of Dead Sea  
Natufian culture - well built houses & signs of rank  
Harvested wild wheat, barley - used flint sickles,  
Stone mortars, and hunted

Climate becomes hotter, drier

Overcrowding, shortages led to need for food source  
favors annuals over perennials shorter cycle  
larger seeds in husks - easier to collect

Save, plant, harvest

Evidence: seeds in settlements of Natufians successors

Mutant: fatter, adheres to husk better  
⇒ domestication, selection without forethought  
leads to rapid evolution of wheat  
and hunting decreases rapidly

Domestication (and farmers?) spread northward  
at ~ 1 km/year

Hole & McCorriston    *American Anthropology*  
~ April 1991

# Agriculture leads to higher level political organization

|                           | <i>Band</i> | <i>Tribe</i> | <i>Chiefdom</i>               | <i>State</i>                |

# Information

Genes  $\longrightarrow$   $10^{10}$  bits (or less)

Brains  $\longrightarrow$   $10^{14}$  bits

$\longmapsto$   $1400 \text{ cm}^3$  in humans

Extra-somatic information

leads to communication: information passed  
between individuals.

Allows **societies** to evolve.

# Information and Intelligence

- Can we think of extra-somatic information as intelligence?
- Collective “intelligence” of the species
- But cannot be assimilated by any individual
- Collective knowledge does lead to ability to engage in interstellar communication

|                 |             |                          |

|------------|--------|------|
| Transistor | 1948   | U.S. |
| Microchip  | 1959   |      |
| Internet   | 1990's |      |

# Metal Tools

Copper

Bronze

Iron

# Uniqueness

## 1. Agriculture

At least 5 (and maybe 9) independent origins  
Southwest Asia, China, Mesoamerica, Andes,  
Eastern U.S.

## 2. Written language

2-4 independent origins

Sumer, Mesoamerica, China(?), Egypt (??)

*Only* after farming

# From Guns, Germs, and Steel

Jared Diamond

HISTORY'S HAVES AND HAVE-NOTS ▪ 99

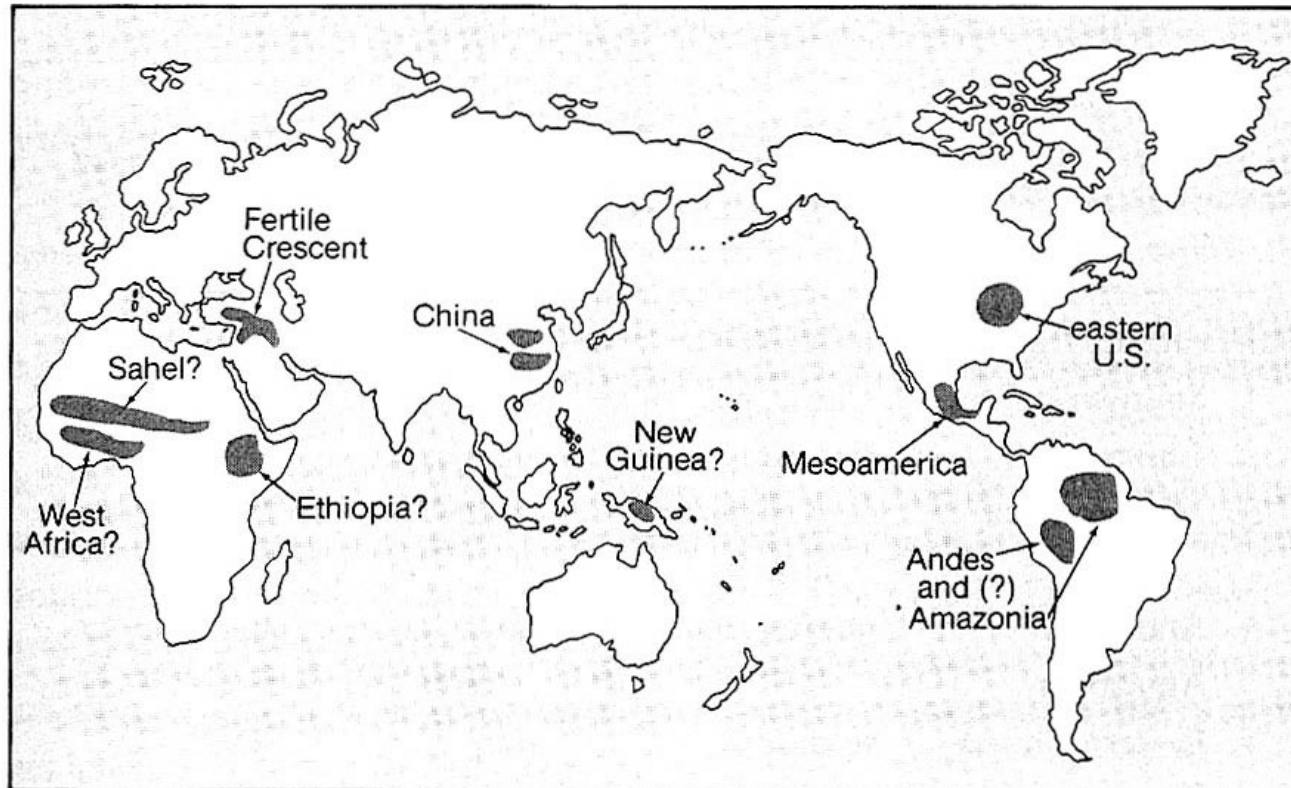

Figure 5.1. Centers of origin of food production. A question mark indicates some uncertainty whether the rise of food production at that center was really uninfluenced by the spread of food production from other centers, or (in the case of New Guinea) what the earliest crops were.

# From Guns, Germs, and Steel

# Uniqueness

## 3. Centralized states, specialization

Several independent origins

Only after farming

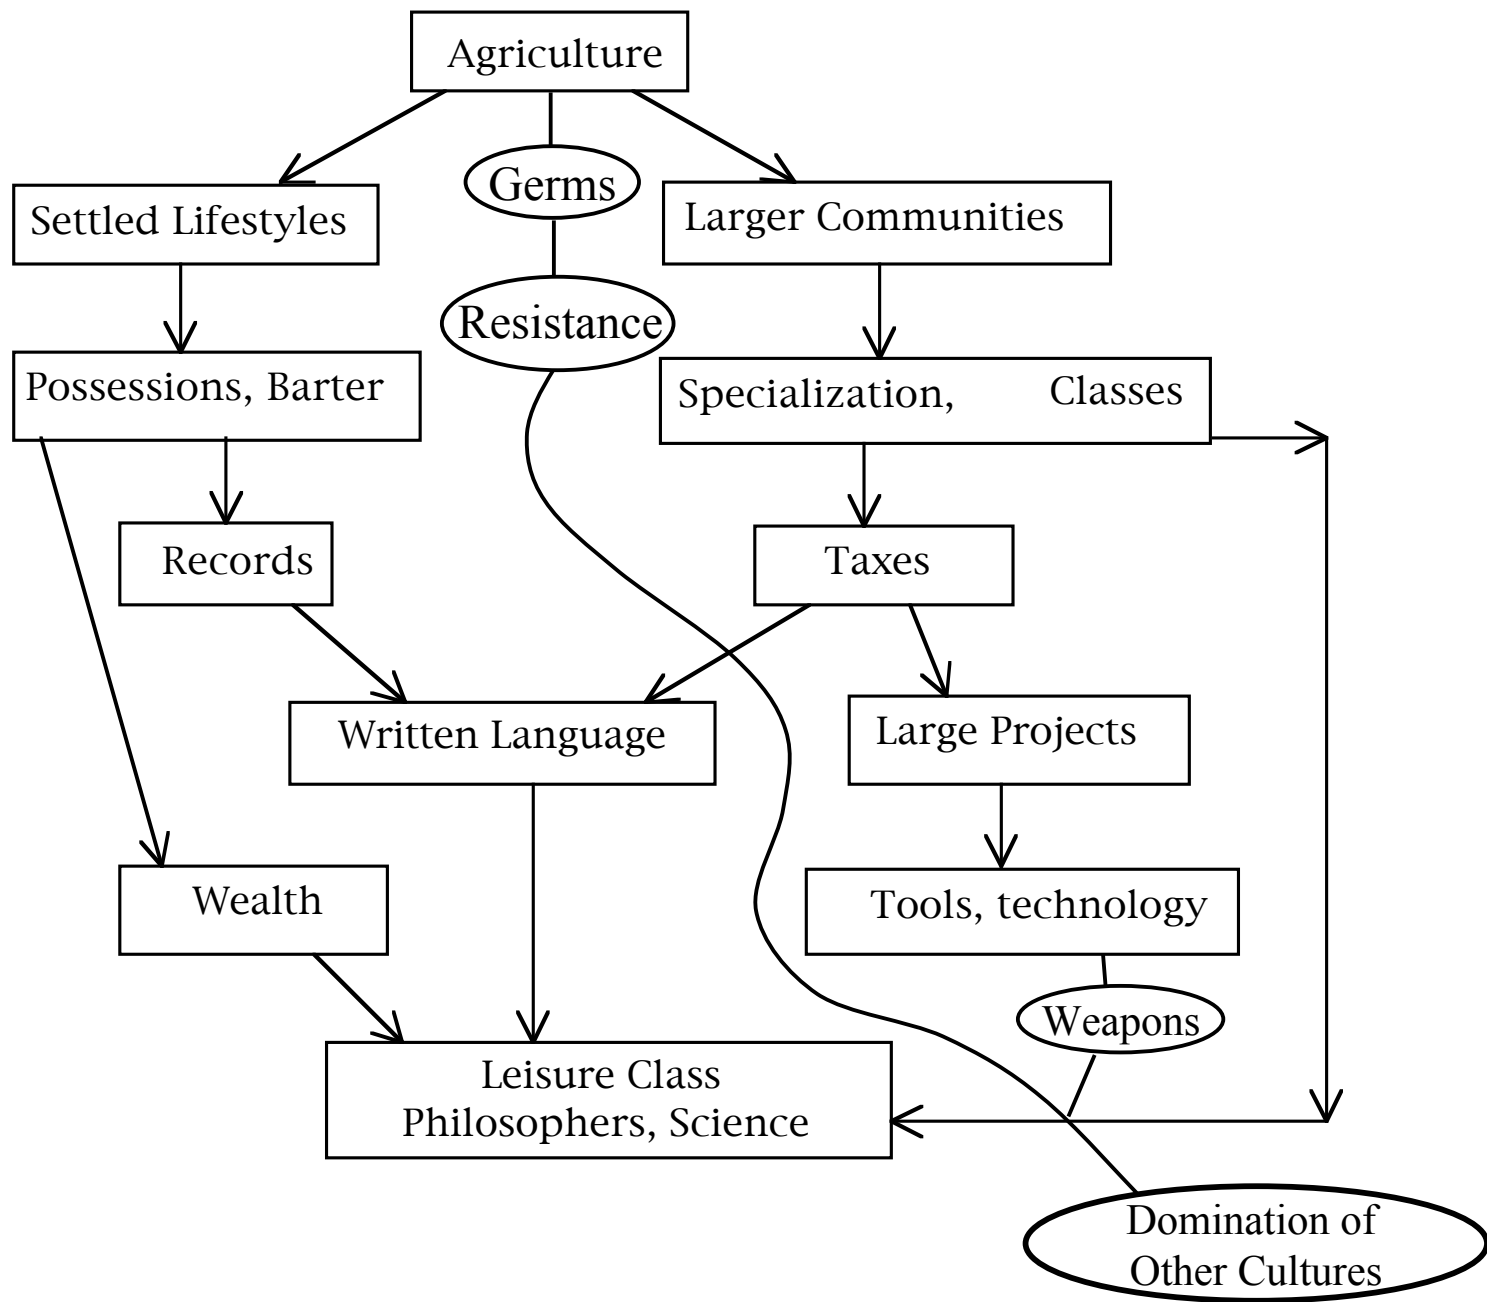

## 4. Metal use

Near East

New World (Andes) mostly decorative

## 5. Industrial Revolution, modern electronics

(no test possible - all world in contact)

# Questions

How does cultural evolution differ from biological evolution?

Does “natural selection” operate in cultural evolution?

If so, is technology an “advantageous trait”?

Is “cultural evolution” a valid description of “history”?
