# **Cultural Evolution**

## Next Factor in Drake Equation: f<sub>c</sub>

- f<sub>c</sub>: fraction of planets with intelligent life that develop a technological phase, during which there is a capability for and interest in interstellar communication
- No significant biological evolution in last 40,000 to 200,000 years (maybe 5000 yr)
- Evolutionary Takeover
  - Cultural evolution instead of biological
  - Much shorter timescale

## What is Cultural Evolution?

- No longer changes in genes (biological)
- Extra-somatic information
  - Information stored outside the body
- Changes in knowledge of group
  - Passed on by learning from others
- Allows combination of "lessons learned" from many individuals

# Example

- Culture in primates other than humans?
  - Differences in behavior of groups
- Example: Orangutans in Kluet swamp in Sumatra
  - Make and use tools (bark-stripped twigs) to get honey and seeds from fruit
  - Genetically similar group across Alas river do not
  - River too wide to cross
  - Key feature is high density: observe each other's behavior and learn

Van Schaik, Sci. Am. April 2006

## Concepts

- 1. Timescales
- 2. Origin of agriculture
- 3. Extra-somatic information storage
- 4. Tools, technology
- 5. Interactions: written language, cities, taxes, classes, technology
- 6. Interest in communication
- 7. World view evolution
- 8. Coupling between technology and world view

## Timescales

- On next slide (which we will look at in more detail later) notice the timescales
- MUCH shorter than the previous kinds of evolution
- And accelerating!

| Oral language   | 400,000?   | Cooperative hunting?     |
|-----------------|------------|--------------------------|
| Oral historians | 30,000?    | Traditions and Lore      |
| Clay tokens     | ~ 8500 BCE | Sumeria (record keeping) |
| Clay tablets    | ~ 3000 BCE | Business, Taxes          |
| Paper           | ~ 100      | China                    |
| Printing press  | 1456       | Europe                   |
| Radio           | 1895       | Italy                    |
| Television      | ~ 1936     | First "strong" broadcast |
| Computers       | ~ 1950's   |                          |
| World-wide-web  | ~ 1990's   |                          |

#### Importance of farming

- The rise of civilizations all based on farming
- Understand origins of agriculture
- How likely to arise?
- Did it arise **independently** more than once?

## Origin of Agriculture

10,000 years ago within 50-100 miles of Dead Sea Natufian culture - well built houses & signs of rank Harvested wild wheat, barley - used flint sickles, Stone mortars, and hunted

Climate becomes hotter, drier Overcrowding, shortages led to need for food source favors annuals over perennials (shorter cycle) larger seeds in husks - easier to collect Save, plant, harvest Evidence: seeds in settlements of Natufians successors  Mutant: fatter, adheres to husk better
 ⇒ domestication, selection without forethought leads to rapid evolution of wheat and hunting decreases rapidly

Domestication (and farmers?) spread northward at ~ 1 km/year

Hole & McCorriston <u>American Anthropology</u> ~ April 1991

#### Agriculture leads to higher level political organization

J. Diamond, Guns, Germs, and Steel

## Information

- Genes  $\longrightarrow$  10<sup>10</sup> bits (or less)
- Brains  $\longrightarrow$  10<sup>14</sup> bits

 $\downarrow$ 

 $\longrightarrow$  1400 cm<sup>3</sup> in humans

Extra-somatic information leads to communication: information passed between individuals.

Allows **societies** to evolve.

| Oral language   | 400,000?   | Cooperative hunting?     |
|-----------------|------------|--------------------------|
| Oral historians | 30,000?    | Traditions and Lore      |
| Clay tokens     | ~ 8500 BCE | Sumeria (record keeping) |
| Clay tablets    | ~ 3000 BCE | Business, Taxes          |
| Paper           | ~ 100      | China                    |
| Printing press  | 1456       | Europe                   |
| Radio           | 1895       | Italy                    |
| Television      | ~ 1936     | First "strong" broadcast |
| Computers       | ~ 1950's   |                          |
| World-wide-web  | ~ 1990's   |                          |

## Information and Intelligence

- Can we think of extra-somatic information as intelligence?
- Collective "intelligence" of the species
- But cannot be assimilated by any individual
- Collective knowledge does lead to ability to engage in interstellar communication

## Written Language

- Played key role in expanding knowledge
- Could be stored outside any person's body
- Developed first in Sumeria
  - Clay tokens to keep accounting
  - Clay tablets
- Spring 2006 exhibit at Harry Ransom Center
  - http://www.hrc.utexas.edu/exhibitions/current/2006/writing/

## Tools and Technology

### Bronze

Iron

## The Importance of Iron

- Iron played crucial role because of strength
- But late because it requires very high temperatures to 'reduce' to elemental state
   And addition of carbon to make an alloy
- In 1800 BCE, 40 ounces of silver to buy one ounce of iron!
- By 600 BCE, one ounce of silver bought 2000 ounces of iron

From The Substance of Civilization by Stephen Sass

## Uniqueness

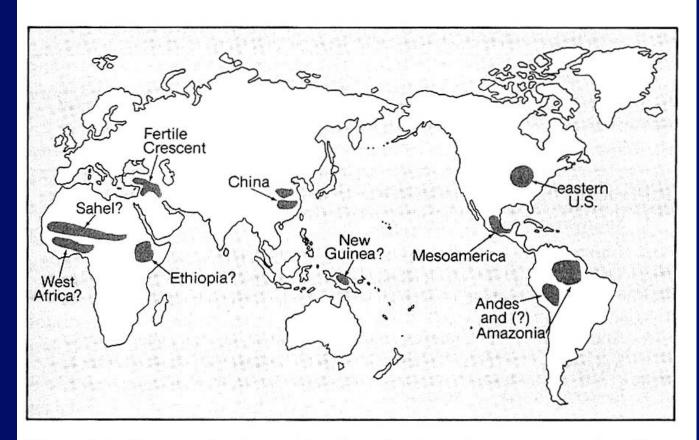

#### 1. Agriculture

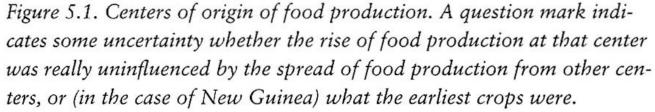

At least 5 (and maybe 9) independent origins Southwest Asia, China, Mesoamerica, Andes, Eastern U.S.

2. Written language
2-4 independent origins
Sumer, Mesoamerica, China(?), Egypt (??)
Only after farming

## Uniqueness

- Centralized states, specialization
   Several independent origins
   Only after farming
- 4. Metal use
   Near East
   New World (Andes) mostly decorative
- Industrial Revolution, modern electronics (no test possible - all world in contact)

How does cultural evolution differ from biological evolution?

Does "natural selection" operate in cultural evolution?

If so, is technology an "advantageous trait"?

Is "cultural evolution" a valid description of "history"?
